

# Waterproof Bucket Seat Protector

## Installation and Washing Instructions

Thank you for purchasing the Waterproof Bucket Seat Protector. The protector will help keep your passengers and/or your pets comfortable, and your seats clean and protected for many years. Your protector is fast and easy to install. Head restraint posts are required to install the Bucket Seat Protector in your vehicle. The protector can be used on any bucket seat. Your protector is completely reversible with upholstery grade microfiber on one side and thick Berber™ fleece on the other side.

### Step 1:

Remove the protector from the plastic bag. Place the protector onto the bucket seat with the fabric that you want to use facing up.

### Step 2:

Locate the side release buckle “A” on the top of the protector. If necessary, raise the head restraint so you can get to the posts underneath. Undo the side release buckle. Loop the webbing strap around the head restraint posts and reattach the two ends of the side release buckle.

### Step 3:

Next, locate the webbing straps and side release buckles that are marked “B” in the photo...  
continued on next page...

**Warning: If your vehicle has side air bags that deploy from your bucket seat do not use the webbing attachments “B” on the side of the protector and remove the webbing “B”.**

# Installing Your New Waterproof Bucket Seat Protector

## Step 3 Continued...:

... Do not use the webbing attachments on the side of the protector if your vehicle has side air bags that deploy from your bucket seat. If your vehicle has side air bags that deploy from the bucket seat remove the webbing straps and side release buckles "B" so as not to interfere with the air bag deployment.

If you do not have side air bags that deploy from your bucket seat, undo the side release buckles. Wrap the webbing straps around the back of the bucket seat and reattach the side release buckles. Adjust the webbing length to how tight you would like the seat protector on your bucket seat.

## Step 4:

On both sides of the protector there is elastic webbing "C". Stretch and secure this webbing under your bucket seat to ensure the base of the protector stays in place.

## Washing Instructions:

The Waterproof Bucket Seat Protector is fast and easy to clean.

To avoid damage when cleaning, reattach all of the side release buckles. Wash and dry separately from other items. Machine wash the protector using cold water on a gentle setting using a mild laundry detergent, such as Woolite. Tumble machine dry on a cool to warm setting. Do not use bleach, and do not dry clean as these will damage the upholstery grade microfiber fabric.

The protector can also be hosed off using a garden hose. Either hang the protector to dry, or machine dry on a cool to warm setting.

In the event of a pet 'accident' we recommend removing the protector from the vehicle. Using an enzyme based urine treatment, such as "Urine Off", apply directly on the accident. Allow the enzyme to dry completely before machine washing and drying the protector. Should urine odors persist you can reapply the treatment and/or contact the enzyme manufacturer for further recommendations.
