

Rechargeable LED Safety Neck Loop

- Instructions to cut the Loop to the right size

The Neck Loop is a safety neck band that your dog wears over their regular collar. **THE LOOP SHOULD NEVER BE USED AS A DOG COLLAR, OR ATTACHED TO A TIE OUT.**

To put the Loop on your dog, slip the Loop over your dog's head, or open the clasp, wrap around your dog's neck, and close.

If the Loop is too long you can quickly and easily cut the Loop to the size needed. To determine the right size, place a leash or cloth belt around your dog's neck where the Loop will sit. Make sure the leash or belt is overtop of your dog's collar and there is space between the collar and the Loop (allow two or three fingers between the Loop and collar). Mark the leash or belt and measure that length with a tape measure.

Important - If the Loop needs to be shortened, the Loop needs to be cut on the end with the scissor symbol. The Loop will not work if cut on the end closest to the On/Off switch.

Mark the correct length on the Loop by measuring from the On/Off switch toward the scissor symbol. On the side marked with the scissor symbol, gently pull the orange tubing from the clasp. Cut the Loop with a pair of sharp scissors. Reinsert the orange tubing onto the clasp.

The Loop is now ready to use to keep you and your dog seen and safe.
