

Waterproof Breathable Duvet Protector

Using Your Duvet Liner & Washing Instructions

Thank you for purchasing the Waterproof Breathable Duvet Liner. The liner will help protect your duvet for many years to come.

Installing and removing the liner is quick and easy. The liner uses a space age polyester membrane that is both waterproof and breathable.

We make several recommendations that will ensure your duvet is protected, you have a great night's sleep and are able to easily wash your liner.

Step 1:

Remove the liner from the plastic bag. The liner has mesh panels in the side and end gussets. The mesh panels allow air to escape providing a comfortable night's sleep.

Step 2:

Your duvet goes inside the liner. The liner (with the duvet inside) goes inside your fashionable printed duvet cover.

Open the liner zipper. Place the duvet inside the liner. Find the cotton ties **inside** the liner on each corner (there are also four ties on the outside of the liner – for this step you want the ties **inside** the liner). Tie the corners of the duvet to the inside cotton liner ties. This will stop the duvet from shifting within the liner. Close the liner zipper.

Step 3:

Place the liner (with the duvet inside) inside your fashionable printed duvet cover. Tie the cotton ties on the **outside** of the liner to the fashionable duvet cover. This will keep the liner from shifting within the duvet cover and will ensure the mesh panels remain on the sides.

Liquids can enter the liner through the mesh panels and/or the end zipper. On most beds the end and sides of the duvet typically hang over the side and end of the bed. It is important to ensure the duvet and the liner does not shift within your fashionable duvet cover so the duvet is protected.

Washing Instructions:

Your Waterproof Breathable Duvet Liner is fast and easy to clean.

- Wash and dry separately from other items.
- Wash the liner with cold water on a delicate setting using a mild laundry detergent, such as Woolite®.
- Do not use bleach or fabric softeners as these may damage the waterproof breathable membrane.
- Because the liner fabric is waterproof you may need to manually drain any water captured within the liner before spin drying.
- Tumble machine dry on a cool setting.
- Do not dry clean as these will damage the fabric.

In the event of an 'accident' remove the duvet immediately from the cover and liner. We recommend using an enzyme based urine treatment directly on the accident. Follow the directions on the urine treatment product.
